

Well Committee/Member@Large report

December 10th 2021

The well committee members had an opportunity to focus on maintaining the visual appearance of the well and the common area surrounding it. We hope the community members would approve of the work put in by the volunteers that spent a measurable amount of their day to be apart of this effort.

While performing our routine inspections and minor preventative maintenance to the well and the adjacent holding tank, we did come across an issue that will need more detailed repairs to keep the common area well operating. This committee has made the decision to forgo any immediate repairs so that we may be able to further inspect and put together a comprehensive "solution plan" including much needed testing of the overall quality of the water that we may present to the PO's and this board for consideration and vote. It is at least this members belief that each lot actively occupied has a current well or water solution. (aside from maybe two)

If there is any that may in the near future (while repairs are being done) have an emergency water need, I ask that you consider contacting me (as your neighbor) for assistance with possible solutions.

In closing, I'd like to personally thank Mr Crouch for volunteering his experience and equipment. I'd also like to thank Mr. Shelburne and Mr. McFarland for their valuable input and guidance when called upon.

Submitted,

Tommie Smith
